The Origins of Romanian and its Dialects
(Critical Remarks on Some Recent Works)

In the present article the author analyzes the arguments of some Romanic Germans who deny the continuity of a Latin presence in the North of the Danube after the Slave invasion from the 17th century, continuing the thesis of his predecessor Robert Roesler. Focusing mainly on historic arguments rather than linguistic, the author underlines the weak points of these arguments, trying at the same time to value the contributions of the Romanian searchers in this field.
